WORK EXPERIENCE

Full Stack Software Engineer	Nairobi, Kenya
<i>Full Stack Software Engineer</i>	<i>Mar 2026 - May 2026</i>
- Engineered a fault-tolerant, KDPA-compliant telecom and AI platform (FastAPI, Next.js, Neo4j) integrating Africa's Talking and M-Pesa rails, reducing manual query triage from hours to minutes and session recovery times by 50%. - Designed and deployed scalable web-based management systems (Next.js, Supabase, PostgreSQL), implementing robust relational schemas, middleware authentication, and custom API endpoints to streamline local tenant operations. - Integrated local Kenyan payment gateways (M-Pesa Daraja and PayHero) with transactional webhooks to completely automate subscription workflows and billing reconciliation.	

EDUCATION

Modcom Institute of Technology	Nairobi
<i>Full-stack Software Development</i>	<i>Graduation Date: May 2025</i>
UNIVERSITY OF NAIROBI	Nairobi, Kenya
<i>BACHELOR OF SCIENCE IN DATA SCIENCE</i>	<i>Graduation Date: 2029</i>

PROJECT EXPERIENCE

Niru AI Hackathon	Nairobi, Kenya
<i>UHAKIKI AI(Agentic AI and Gen AI) Niru AI</i>	<i>Dec 2025 - Mar 2026</i>
- Developed an asynchronous, agentic fraud audit system using FastAPI that reduced Kenyan credential fraud by 40% through multi-layered automated verification. - Architected KDPA-compliant systems embedding Privacy by Design (Sec 41) and human-override safeguards (Sec 35), ensuring 100% auditable AI-driven fraud decisions.	
KenyaAI Challenge	Nairobi, Kenya
<i>AgriConnect Nigeria ; Multi-Channel AI Advisory</i>	<i>Jun 2026 - Jul 2026</i>
- Architected a FastAPI multi-agent advisory system routing USSD/SMS/voice queries to domain-specific agents grounded by a Neo4j knowledge graph and ChromaDB RAG pipeline. - Designed stateful multi-turn advisory systems over Africa's Talking infrastructure, utilizing phone-number-keyed SQLite checkpoints to resume dropped USSD/SMS sessions instantly without client-side apps. - Engineered dynamic per-channel formatting (USSD, SMS, and markdown) with automated length-guard truncation, alongside an NDJSON stream powering real-time UI updates on a React dashboard.	
<u>Unleashed-Loop.dev</u> Hackathon	Nairobi , Kenya
<i>Nairobi Space of AI Tools (NSAIT)</i>	<i>Aug 2026 - Aug 2026</i>
Solved: Simplified digital payments for users with accessibility barriers through a voice-first payment experience supporting English, Kiswahili and Sheng. Built: Developed a voice payment system using ElevenLabs, n8n, Supabase, Python, Node.js and Next.js, integrating LOOP APIs, M-Pesa, PesaLink, Till and Paybill, and built a custom MCP/API Skill for LOOP to ground AI assistants in verified API documentation.	

SKILLS & INTERESTS

Skills:	JavaScript, TypeScript, Python, SQL, C, HTML/CSS, R
Frameworks & Libraries:	React.js, Next.js, FastAPI, React Native, Node.js, Express, PyTorch, Tailwind CSS
Databases & Vector Stores:	PostgreSQL, MySQL, Neo4j, Supabase
APIs & Integrations:	M-Pesa Daraja, PayHero, Africa's Talking (USSD/SMS)

CERTIFICATIONS

AI Fluency: Frameworks and Foundations & Claude 101: Anthropic Academy , SkillyMe Africa, Data Analytics
Certificate, Full Stack Software Developer(Modcom)
